CryptoCrew Validators is a reputable Austrian-based web3 infrastructure provider, validator, and IBC relayer, committed to upholding the highest standards of transparency, integrity, and security. With a global network of decentralized bare metal servers, the company utilizes advanced security and monitoring systems, overseen by an experienced 24/7 on-call operator team.

Since 2021, CryptoCrew Validators has been instrumental in securing multiple millions in USD worth of assets on more than 40 interchain networks. Their renowned IBC relayer systems interconnect these networks, facilitating millions of IBC transactions, solidifying CryptoCrew's position as a key player in the Interchain ecosystem.

CryptoCrew serves as a core contributor to various chains built with the Cosmos-SDK. As such, the team maintains close collaborations and service partnerships with prominent projects, including Osmosis Foundation, Injective Labs, Wormhole Foundation, Neutron, Kava Origins or Dora Factory.

Emerging victorious in the Game of Chains Interchain Security testnet on the Cosmoshub and having received a grant by the ATOM Accelerator DAO, CryptoCrew is well-positioned for the expansion of the AEZ (Atom Economic Zone). CryptoCrew is working alongside AADAO, Informal Systems and Hypha on ICS consumer chain onboarding and co-hosts the Atom Zone podcast by Cosmos Hub on X. Eager to propel interchain adoption, the team is growing its presence within the Cosmos ecosystem and embarking on multiple new projects in 2024.

CryptoCrew Validators has received an AAA rating (the highest rating possible) as a[Verified Staking Provider on StakingRewards](#).

Stake your $ATOM with CryptoCrew: [

SERVICES & CONTRIBUTIONS:

- CryptoCrew is one of the biggest IBC relayers worldwide, connecting more than 50 chains

- Node snapshots (minimum size snapshot from fresh statesync session, updated daily or hourly)

- Seed node, live peer lists, hosted address book, hosted genesis file, full state export

- Public RPC/gRPC/LCD (TLS, WS, grpc via TLS, rate-limited)

- Auto-compounding

- Reward calculator

- Whale rebate

- Tutorials, guides, videos, our blog and a fierce community across various social media platforms

GOVERNANCE:

Our governance team consists of experts with a deep understanding of the ecosystems and protocols in which we participate. Each proposal is carefully reviewed by our team. We analyze the potential impact, benefits, and risks associated with the proposal, as well as the overall sentiment within the community. We share a monthly governance report with an overview of our votes and the reasoning behind them. We always encourage an open discussion and share a reminder that every staker can override their validator's decision by voting themselves.

SECURITY:

To ensure maximum security of your staked assets we use bare-metal servers in tier-4 datacenters all over the world. Keys are stored on remote key management systems (Horcrux) or on hardware key modules. We use high-tech intrusion

detection and prevention systems & encrypted connections.

IBC RELAYER & INTEGRATOR:

The Inter Blockchain Communication protocol serves as the backbone of the interchain. We are under the top 5 IBC relayers in the world and are currently relaying on over 50 networks. We've helped multiple projects to integrate IBC seamlessly. We provide powerful IBC infrastructure to chains we support.

ON-CALL & SUPPORT:

Our experienced on-call incident response team monitors our system metrics around the clock. Operators work in shifts to ensure high uptime and a fast incident response. If you have any questions please reach out! Our professional support team is happy to help you: support@ccvalidators.com

INFRASTRUCTURE:

- For mainnets we utilize at least 2 single-tenancy bare-metal fullnodes as signature entrypoints (consensus nodes). Keys are stored on remote signer systems. Each node is located with a dedicated provider and in a dedicated region. Locations: Vienna, Frankfurt, Falkenstein, Amsterdam, Strasbourg, Warsaw, Helsinki, London, Tokyo, Singapore.

- All connections are private & encrypted, we utilize common machine-, user-, and process-hardening strategies, NIDS and IDS.

- Multi-Level monitoring & alerting stack: Tenderduty, Prometheus, Grafana.

- Experienced 24/7 incident response team.
