Chain parameters

Param	Description	Arbitrum One	Arbitrum Nova	Arb Sepolia
Dispute window	Time for assertions to get confirmed during which validators can issue a challenge	45818 blocks (~ 6.4 days)	45818 blocks (~ 6.4 days)	20 blocks (~ 4.0 minutes)
Base stake	Amount of stake required for a validator to make an assertion	1 ETH	1 ETH	1 Sepolia ETH
Force-include period	Period after which a delayed message can be included into the inbox without any action from the Sequencer	5760 blocks / 24 hours	5760 blocks / 24 hours	5760 blocks / 24 hours
Gas speed limit	Target gas/sec, over which the congestion mechanism activates	7,000,000 gas/sec	7,000,000 gas/sec	7,000,000 gas/sec
Gas price floor	Minimum gas price	0.01 gwei	0.01 gwei	0.1 gwei
Block gas limit	Maximum amount of gas that all the transactions inside a block are allowed to consume	32,000,000	32,000,000	32,000,000
