A mechanism should be put in place to enforce UNI's price stability and strong growth, which should be based on the inherent financial strength of our Uniswap project going forward. UNI should be available only for sale and should never be distributed again without being backed by underlying cash reserve and proportional liquidity, based on profits earned by the project. We should stop emission of UNI immediately after the current liquidity based mining on the 4 different pools comes to an end in November. Governance tokens are equivalent to shares held by shareholders of any profit making project. The 1 Billion Max supply of UNI is like authorized capital

and the current supply is like issued capital

. Any UNI Rewards going forward should be bonuses to UNI holders based only on the profits and cash reserves held by the Uniswap Project after being voted for and approved by the community members. This will make sure the price will be stable at the Nov 2020 levels and keep increasing as we go forward. In order to increase user base and attract further investments on a continuous basis we need to distribute rewards to all UNI holders using other tokens

traded on Uniswap and never use UNI for this again

. This reward should be a function of individual UNI holdings and the Time Period for Which UNI is being held. The Longer a person holds UNI the Higher the relative proportion (UNI Amount Held x Time Period of Holding UNI) of rewards that can be claimed. The "Time Period of Holding UNI" variable should have higher weight-age in the function than the "UNI Amount Held" variable, in order to discourage whales and speculators to buy UNI for the short-term only to claim monthly rewards. A continuously yielding staked pool of 10 % of fees collected as Different Tokens should be set aside for this. Any unclaimed rewards in other tokens should be sold on a monthly basis and be used to create liquidity for UNI and for buy back of UNI. Live tracking of potential monthly rewards that can be claimed, based on the above mechanism should be searchable and displayed on Uniswap.info. As the financial reserve of Uniswap keeps increasing based on volumes and the fees generated, it will keep increasing the net worth of the project and hence keep pushing the price of UNI on an upward trajectory.

Future revenue generating operations should be introduced with active discussion and participation by community members. For example the daily volume

of Deribit Futures and Options exchange with just BTC and ETH as the underlying assets, is approximately 250 million USD. The profit earned by Deribit with this volume on a daily basis is more than half a million dollars. The core business and strength of Uniswap is earning profits by providing liquidity based exchange services. Hence getting into the business of providing Futures and Options trading on Uniswap platform will be a natural evolution for the Uniswap project. If Uniswap can get into leveraged Futures and Options trading and introduce the top 20 Coins/Tokens or may be make this facility available for every token that is listed on Uniswap, that has sufficient liquidity, the potential volume of trading per day is an additional Billion Dollars and a potential profit of 3 million dollars per day. Today centralized exchanges decide on their own as to which projects can be listed in the futures and options section. Being a truly decentralized project, if Uniswap offers this to every project that can bring in liquidity without any bias, this will attract several new and old projects who wish to have their Tokens on the Futures and Options market, to Uniswap. This will result in more daily volumes, profit, cash reserves and increase in net worth of Uniswap, which will result in constant upward pressure on the price of UNI. The future looks bright for our Uniswap project and the prospects of UNI becoming a true, Blue Chip security, with regular returns and long-term wealth creation for investors and long-term holders, is an absolute given with unquestioned certainty, if these mechanisms are put in place.
