As described in [Aavenomics](), an important part of the community governance is how governance ideas eventually are implemented in the protocol.

I'll give a short overview of this process, in its current form.

(This post has been updated for V2 governance

)

1. An Aave Request for Comments (ARC) is created and reviewed by the community

2. If the ARC is non-contentious, then an Aave Improvement Proposal (AIP) can be created

3. The AIP, including the necessary payloads, are submitted on-chain for a governance vote.

For more information, see our [Governance Docs here]().
