Hello everyone!

Stakely is a professional Staking-as-a-Service company based in Spain, specializing in Proof-of-Stake blockchains. With over 5 years of experience in the blockchain industry, we offer reliable and user-friendly staking solutions. Since our launch, we have enhanced our infrastructure, monitoring, and automation systems to provide optimal performance and security measures for over 40 blockchains.

At Stakely, we are dedicated to making blockchains more accessible and user-friendly. Our contributions

include setting up node relayers to facilitate smooth communication and data transfer within these networks. Additionally, we have developed the following tools:

1. [Staking Dashboard](#): this tool allows users to monitor their staked assets, track rewards, and easily manage their wallets.

2. [Multicoin Faucet](#): it offers easy access to a variety of tokens, making it convenient for new users to get started.

3. [Load Balancer](#): this tool enhances the scalability of decentralized applications. It optimizes resource allocation, improving performance and efficiency for users.

We also create educational content and video tutorials on our YouTube channel.

Our infrastructure

is strategically located in various geographic regions to ensure optimal performance and reliability. We utilize a combination of baremetal and cloud-based hardware, deployed in diverse locations, to achieve redundancy and minimize latency.

With a team

of skilled DevOps engineers, blockchain experts, and dedicated content creators, we contribute to blockchain adoption through active participation, testing, and community engagement.

Through extensive participation in previous testnets and mainnets, we have gained valuable best practices. We prioritize load testing and transparent communication channels to avoid potential pitfalls and maintain strong community involvement.

Transparency and community governance are vital to us. We actively review governance proposals and communicate our decisions to delegators, empowering them to exercise their voting rights.

Stakely is thrilled to witness dYdX's integration into the Cosmos ecosystem, opening up new possibilities for cross-chain trading and expanding its user base. As active supporters of dYdX and advocates for open-source initiatives, we're excited to collaborate with the dynamic dYdX community!
