Hi,

I'm trying to execute a secrect contract function from multiple account for testing purpose. The contract I'm using is the Millionnaire one, however when I'm trying to compute the task using another account than the first one, it doesn't work. The error I get is :

{ name: 'NotEnoughTokens', message: 'Not enough tokens to pay the fee' }

But is it possible to fund these accounts with tokens to be able to use them?

