Hey Uniswap community,

This is Doo from the StableLab team, and we recently launched[DAOmeter,](link) a maturity rating system for DAOs.

The goal of DAOmeter is to serve as a public good by providing an effective method of evaluating and benchmarking the maturity levels of various protocols. This is achieved through a scoring system that encompasses key categories within protocols, such as Community, Voting, Documentation, Security, and more.

Based on our evaluation, we have assigned Uniswap a maturity score of 73%.

](https://global.discourse-cdn.com/business6/uploads/uniswap1/original/2X/4/4d41c315f135888b73a40a37381be3dff8d84b01.png)

Some areas of improvement that can be made include:

- Delegate compensation

- Diversifying the treasury

We'd like to clarify that DAO maturity doesn't equal "decentralization". We provide a 40 page report on the breakdown of the score as well as the research methods behind DAOmeter, which you can find here.

As we're committed to the continuous improvement and development of this tool, we'd love to hear from the broader community. Please feel free to share your thoughts, suggestions, and insights with us as we work to improve the DAOmeter scoring system.
