Hello Eigen fam

I'm trying to register account on forum for e-mail and there appears to be some sort of problem.

I requested registration link twice and its not sending me anything, spam folder checked.

When I try to recover password forum tells me that this account already exists, so it's taken it into the DB just not following the protocol for registration, like something is stuck inside.

Can someone from forum mods have a look for me please!

Much appreciated and have a great day!
