# AA41 too little verificationGas

The amount of gas used by the smart account verification exceeded theverificationGasLimit set for the user operation.

## Possible solutions

- Verify that theverificationGasLimit
- set for the user operation is high enough to cover the gas used during smart account'svalidateUserOp
- function.
- If you are using theeth_estimateUserOperationGas
- orpm_sponsorUserOperation
- method from bundler provider like Pimlico to set user operation gas limits and the EntryPoint throws this error during submission,reach out to them
- .
- If all else fails, investigate why the smart account'svalidateUserOp
- function used more gas than expected using tools likeTenderly
- .
