Develop a form of Accreditation to provide to Web3 builders / founders / service providers.

Something like the State Bar Association for Lawyers, but for the Web3 Industry.

Literally applying very similar requirements / systems as the state bar association. We would have a code of conduct, ability to file complaints; members apply and are vetted out, pay an annual fee and are provided with resources to help with their line of work and required education / training hours to maintain their Web3 awareness.

This would provide a layer of trust in working with a new Web3 Professional / Vendor and ensure consistent education of the members.
