Note : This is a work in progress, a major part of the things listed down below have already been implemented and the rest are in various stages of development.

Creating a Tech stack which everyone can use within the DAO which I think would be massively beneficial to the DAO/

Ask : IDK (TBD)

For Now, I've decided to only include the tech stack and a small description for it. I'll add to this post in the coming days.

This proposal Includes :

ApeCoin Tracker → Live

With additional features which @br00no proposed such as

- Token vesting and release schedules

- Major recipients of Treasury funds (idk, should we ?)

[ApeCoin Tracker : Tracking anon Txns wrt the Treasury](/c/general/14)[General

](/c/general/14)

Proposal Name : ApeCoin Tracker Status : Active in a limited capacity Twitter Handle : https://twitter.com/ApeCoinTracker or @ ApeCoinTracker (created yesterday) Purpose : The purpose of this Draft is to get ideas, actionable advice and feedback from the community. Update : We're thinking of Integrating ApeCoin Tracker Within AIP 233 Some of the questions →

What should be the min cap for a Txn Alert? What Txns should we monitor? Treasury and Staking inflow/outflows, what else? What shoul…

This post contains information about the active wallets which make up our treasury.

[Community led assessment of the DAOs treasury](/c/general/14)[General

](/c/general/14)

As per the official source (ApeCoin) these are the wallets which consists of our DAOs treasury. About 60 of the 100 wallets listed over here has already been discarded and as this list hasn't been updated in quite a while, due to which it has become long obsolete. Some of the tools I was using for onchain intelligence were tracking the outdated list so they had a vastly different idea of our treasury and its balance. Will also include a Dune dashboard for easier following. Current Balance : …

Content Archiving, Translation and summarization → Partially works

- Using machine learning models (Whisper AI) which we train to accurately transcribe, summarise and translate the contents of our discussions, regardless of wherever they take place. That content will then be repurposed, verified and distributed.

- Automated content archiving using a custom script and This gets uploaded to the database and is accessible via calendar and the archive section of the Apecointracker.xyz website.

Archives for Twitter spaces will sync with the designated calendar(s) in an automated manner.

Financial Transparency wrt Grant receivers → Can be rolled out in a week, if that's considered appropriate

- Tracking major KPIs of projects which received grants and showcasing that on a website.@Vulkan's work in this regard

- (Optionally !?) giving them the ability to show their financial statements wrt to funds received as grants.

Taking all of that information and making it accessible in a single area

The stack is ready for this, can even showcase an MVP for this with majority of the functionality within a week. First, we'd need to have a discussion about the ethics of something of this sort. Only then we'd be able to implement it at a larger scale.

Event Coordination within the Ape space → Live

[Tracking Events within the ApeVerse with A.C.T. (ApeCoin Tracker)](Suggestions

](/c/general/suggestions/56)

I've made this forum post to inform the other members about this fully functional Integration which I've built to help facilitate the coordination between important spaces within the ApeVerse and the Members who'd love to contribute more towards the discussion over there. Will make some changes to the way I've implemented it but that won't affect the User Experience. It's like a fire and forget missile, but it isn't a missile :) Here's how you do it →
For iOS : 1. Open Calendar

1. Click on…

Event Coordination for Regional / Trait specific events → Live

[Infrastructure for Regional Ape event Coordination](Withdrawn AIPs

](/c/withdrawn/18)

TLDR : Event scheduling for Regional Ape communities Ask → 0 $ APE - 1500 $APE (TBD) This will be entirely free for the participating communities, no hidden fees. Will cover all the costs associated with the software side of things for a year or more. Status → Live

Rationale Coordinate events lead by community members within the sub communities within the ApeCoin DAO (French apes, Canadian apes, Chinese apes, Goofy Apes, Bri'ish Apes , Trait specific apes etc) This way we can empower fra…

Tracking KPI metrics using Dynamic NFTs → Under Wraps

Classify types of contributions one can make into different types and try to quantify that

• On chain contributions :

- Data taken from ThankApe's On chain Thank you notes

- Additional data

Off chain contributions :

• Intellectual Contributions :

- Data taken from Discord and Forum contributions

° Social Contributions :

- Using Sentiment analysis to automatically classify different kinds of sentiments in a particular post and classify it accordingly for further analysis.

zKYC → bRuH, not even close

A non intrusive way to verify identity without all the issues associated with the traditional KYC process.(chain of custody and unauthorised access issues) which was one of the main reasons I applied for the role of governance steward, gaining knowledge about the process.

Here's some blatant self promotion

[Non Intrusive Identity Verification : zKyc](Suggestions

](/c/general/suggestions/56)

This is the mind map of the current plan to explore all possibilities with something like this. It'll be powered by Intel's SGX or AMD's SEV, an encryption standard to encrypt User Data, IPFS for encrypted data storage and decryption key gen, management and reconstruction using Shamir secret sharing to ensure confidentiality and distributed access. Brief overview : In house KYC implementation (which can be scaled up massively) with the priority of keeping sensitive user data safe. We first enc…

More to come →

Closing Statement :

Looking forward to gathering all the feedback and improvements the DAO members are giving me so I can make those proposed changes and make it even better.
