Add Account to Axelarscan

Overview

The ability to add metadata about important on-chain addresses allows users to have a simpler experience seeing on-chain activity for these addresses.

Rather than seeing a raw address on Axelarscan, users will be able to see a customized photo and name for a given address:

How to Add

To add a new address to the list of tracked addresses in the [accounts directory](#) , send a [pull request](#) to the [Axelarscan-UI repository](#) .

Include the following parameters:

- Address: The address you are looking to add.
- Name: The name you want to be displayed for your address.
- Image: The image you want to appear alongisde the name.
- Environment: Whether this address is for mainnet or testnet transactions.

Example

The following example adds the Axelar Governance Address referenced in the image above to the accounts directory.

export default [{ address : 'axelar10d07y265gmmuvt4z0w9aw880jnsr700j7v9daj' , name : 'Axelar Governance' , image : '/logos/accounts/axelarnet.svg' , }] JavaScript Copy No environnment was set, so this address will appear on both [mainnet](#) and [testnet](#) .

Add the following to include the address on mainnet only:

export default [{ address : 'axelar10d07y265gmmuvt4z0w9aw880jnsr700j7v9daj' , name : 'Axelar Governance' , image : '/logos/accounts/axelarnet.svg' , environnment : 'mainnet' }] JavaScript Copy [Edit this page](#)
