Wallet Introduction

Welcome! [Suggest Edits](#)

Magic Eden recently launched a cross-chain wallet that allows you to manage your assets across popular blockchains, including Solana, Bitcoin, Ethereum and Polygon. Access all your favorite Web3 applications, right here.

Developers

The Magic Eden wallet can be integrated into dApps by using trusted libraries, such as the Solana Wallet Adapter on the SVM, or WAGMI on the EVM. Alternatively, web apps can interact individually with the Magic Eden wallet by accessing the magicEden provider that is injected by the ME wallet extension

The majority of these docs are intended to help developers build applications that interact with the Magic Eden Wallet. Please reach out[here](#) if you have any questions or concerns.

Welcome to the Magic Eden Wallet!
