Hey everyone,

I got some new resources to share.

During the last months I've created some docs on to improve your node clusters:

Dive into the details here: Secret Network Node Resources

These resources give you an easy and quick way to make your cluster resilient for outages and include:

- Nginx Setup

: A comprehensive sample to get you started.

- Auto Heal

: An innovative feature for removing stale nodes automatically (handle with care!).

- Monitoring Tools

: Everything you need to boost your cluster's uptime.

Best,

Alex | Secret Saturn
