Maker Protocol Deployments

Find all Maker Protocol contract addresses and ABIs at chainlog.makerdao.com

The Chainlog provides valuable information for developers interacting with Maker Protocol deployments. This includes deployments on the following networks:

- Ethereum Mainnet (
- latest release
-)
- Ethereum Goerli Testnet (
- latest release
-)
-

Each release includes the following information:

- Contract addresses with link to Etherscan
- ABIs
-

Onchain Contract Address Directory

The Chainlog is also available as an onchain smart contract directory (dss-chain-log) that allows developers to programatically fetch Maker Protocol contract addresses directly in a smart contract. This is useful for integrators that want to future-proof implementations in case a Maker module is updated. You can read more about how to utilize the dss-chain-log here.
