# Emission Migration

The migration from V1 to V2 doesn't involve any changes in tokenomics. Emissions of VC on V2 will be released at the same rate as now, provided all VC tokens and veNFT-locked VC tokens migrate successfully to V2. Initially, V2 emissions will adjust based on the number of VC and veVC tokens migrated to V2, offering high APRs as an incentive for early migration. Once migration is complete, the original emission curve will be applied as the same, designed to naturally incentivize.

- Start of V2 emission
- : September 18th, 00:00 AM UTC (same as official V2 launch on zkSyncEra)
-
