Getting test Ether

Currently CAPE is deployed on the [Arbitrum Goerli testnet](#) . You will need to have ETH on the Arbitrum Goerli testnet (also known as AGOR) to interact with the CAPE contract. In practice, this means that you first need to get some ether on the Goerli testnet and then bridge those ethers to Arbitrum Goerli.

1. You can get Goerli ethers at the following faucets:

2. [Goerli PoW Faucet](#)

3. [Paradigm MultiFaucet](#)
4. [Goerli Faucet](#)
5.

6. Once you obtain your Goerli ethers, go to the [Arbitrum Bridge](#) and bridge some ether from Goerli to Arbitrum Goerli:

It might take up to 15 minutes for the ETH to be bridged.
