Hey everyone,

To ensure that forwarding messages in the Packet Forward Middleware are not limited by the current maximum of 256 characters, I propose to increase the max_memo_characters limit to 10k.

I also propose to increase the tx_size_cost_per_byte from 10 to 100 to prevent possible spamming of having bigger memos.

For more info, please refer to the post in Cosmos Hub here[last call] Increase the size of the memo field to 100kb and 10x the cost of bytes - Hub Proposals - Cosmos Hub Forum

Best,

Alex |
