Bridged Token Addresses

Various ERC-20 tokens originally deployed to Ethereum also have corresponding "bridged" representations on OP Mainnet. The Superchain Token List(opens in a new tab) exists to help users discover the correct bridged token addresses for each token. This page is automatically generated from the Superchain Token List.

Tokens listed on this page are provided for convenience only and are automatically derived from the Superchain Token List(opens in a new tab) .The presence of a token on this page does not imply any endorsement of the token or its minter.

OP Mainnet
