# TL;DR

Lido contributors suggest discontinuing the use of Aragon UI (mainnet.lido.fi). The user interface will enter a 'no support period' untill the end of the year. If no significant and reasoned objection arises during the period, the UI is proposed to be shut down.

This is a call to encourage all users to switch to new platforms vote.lido.fi and operators.lido.fi for a seamless experience, as well as a call to invite suggestions for any features that could enhance interaction with the Lido protocol, if needed.

# Motivation

The DAO continues to evolve and enhance its governance processes, and the tools should reflect a commitment to transparency and accessibility. The Aragon UI has served well, but as the DAO moves forward, Lido contributors recognize the need for more efficient platforms.

After careful consideration within Lido contributors from several workstreams and workgroups, it was decided to advise the DAO and community to discontinue the use of Aragon UI and suggest using alternatives, such as

- vote.lido.fi for governance voting

- operators.lido.fi for node operators management.

These platforms are designed to enhance user experience and be an efficient way for interaction with the protocol.
