Programmable Wallet API Rate Limits

View the Programmable Wallet API endpoint rate limits. [Suggest Edits](#)

Web3 Services handle a high volume of API requests. To ensure optimum performance for the many developers using Circle Web3 Services, we implemented rate limits for API requests per second (RPS) per developer entity. These limits ensure the availability, stability, and reliability of Web3 Services.

Rate limits apply to all Programmable Wallets APIs. The default limit per endpoint is 3 requests per second. The following table lists the endpoints with custom limits.

Endpoint	RPS Limit
POST /v1/w3s/developer/wallets	5
POST v1/w3s/transactions/contractExecution/estimateFee	10
POST /v1/w3s/users/token	10
POST /v1/w3s/user/transactions/transfer	20
