LIDO

Dear Lido Community,

I am Ivan Bandaryk, the Field Chief Technology Officer at Protofire DAO.

We propose the deployment of Safe (ex Gnosis Safe) on the Holesky network with the aim of transitioning all Lido testnet functionality from Goerli to Holesky. With a track record of deploying Safes on more than 20 networks (such as Moonbeam, Cronos, Mantle, Oasis, zkSync, zkScroll, Linea and many others) in the past two years and a strong partnership with the Safe team, we are confident that we can deliver a high-quality project within a reasonable budget.

In order to launch and maintain Safe in Holesky network, we propose 2 step project:

- Deployment.

We deploy, configure the latest Safe components on robust and secure infrastructure (dedicated AWS instance). Then we customize UI according to the network branding. Infrastructure includes 2 environments (Stage and Production).

- Maintenance.

Performing regular Safe updates, infrastructure monitoring & optimization, new features enablement (according to requests).

Deployment timeline:

Safe will be completely deployed and tested before 1st of November, if there are no significant issues related to RPC node (insufficient stability and performance) and project starts on 24th of October the latest.

Budget Request:

- An initial payment of $15,000 in DAI for deployment.

- Approximately $6,000 in DAI to be disbursed on a quarterly basis, divided into two components:

- $3,000 for support and maintenance services.

- An additional $3,000 (approximately) to cover infrastructure costs for each quarter, which may vary depending on Safe usage.

- $3,000 for support and maintenance services.

- An additional $3,000 (approximately) to cover infrastructure costs for each quarter, which may vary depending on Safe usage.

Address on ETH network: 0x63d6287D5b853cCfedbA1247fBEb9a40512F709A

—

Our proposal centers around a specific and relatively simple project. However, our broader intention extends beyond this scope. We plan to conduct in-depth research within the Lido ecosystem during the deployment process and subsequently propose more relevant projects, drawing on our extensive expertise. These projects are designed to attract users and increase Total Value Locked (TVL) within the Lido ecosystem.

We appreciate your consideration and look forward to the opportunity to contribute to the growth and success of the Lido ecosystem.

Sincerely,

Ivan Bandaryk

Field CTO, Protofire DAO
