Hi Everyone, thanks for sparing your precious time to help me.

Actually the length of my targets and payloads is not matching. I tried since more than a week but could'nt solve it. Can someone please help me come out of this issue. I would be very very happy if someone help me please. Thanking you

…

```
async takeCrossedMarkets(

bestCrossedMarkets: CrossedMarketDetails

,

blockNumber: number,

minerRewardPercentage: number

): Promise {

for (const bestCrossedMarket of bestCrossedMarkets) {

const buyCalls =

await bestCrossedMarket.buyFromMarket.sellTokensToNextMarket(

WETH_ADDRESS,

bestCrossedMarket.volume,

bestCrossedMarket.sellToMarket

);

const inter = bestCrossedMarket.buyFromMarket.getTokensOut(

WETH_ADDRESS,

bestCrossedMarket.tokenAddress,

bestCrossedMarket.volume

);

const sellCallData = await bestCrossedMarket.sellToMarket.sellTokens(

bestCrossedMarket.tokenAddress,

inter,

this.bundleExecutorContract.address

);

const targets: Array = [ ...buyCalls.targets, bestCrossedMarket.sellToMarket.marketAddress, ]; const payloads: Array = [...buyCalls.data, sellCallData];
```

…

I don't know whether the problem is in this part of code or somewhere else. I've also deployed a contract on the Ethereum Mainnet.

Please someone guide me please.
