I'm following the guide here:https://secretnodes.org/#/tutorials/ledger-swap

I've been able to connect Metamask to Leger Nano. But the ETH address in Ledger Live with the ENG in it, does not show in Metamask. I've scrolled through over 120 address. It does not show.

Am I missing a step? Does the ENG have to be sent from Leger Live address to a Metamask address to complete the burn?

Thanks
