Exploring

All inspect output data is stored in Postgres.

To connect to the local Postgres database for querying, launch a client container with:

./mev db When you see the prompt

mev_inspect=# You're ready to query!

Try finding the total number of swaps decoded with UniswapV3Pool

SELECT

COUNT (*)

FROM swaps WHERE abi_name = 'UniswapV3Pool' ; or top 10 arbs by gross profit that took profit in WETH

SELECT

* FROM arbitrages WHERE profit_token_address =

'0xc02aaa39b223fe8d0a0e5c4f27ead9083c756cc2' ORDER

BY profit_amount DESC LIMIT

10 ; Postgres tip: Enter\x to enter "Expanded display" mode which looks nicer for results with many columns
