Hey everyone,

while helping others with their nodes (just as being a part of the validator community) I got the impression that some need more help sometimes then we can provide them (especially smaller validators without essential knowledge) with the docs and GitHub repositories.

I had the idea that maybe some small funding from the community pool (or from any committee if that makes more sense) could be used to have a node/validator runner support would be the first person to talk to in case there are problems with a node or validator.

The person could even assist in helping with optimizations of smaller nodes/smaller validators to make them more stable and improve uptime. I felt that sometimes the smaller validators don't know where to start and don't know how to optimize everything or bigger node runners that just need a (fast) helping hand with quick sync or other errors.

I would like to have your opinion on that first and if would make sense to pay someone (I would be interested in doing it) for doing this part time/full time ?

Also I would like to know if you are content in me doing this kind of support ?
