Overview

mev-inspect-py is an MEV inspector for Ethereum

Given a block, mev-inspect finds:

- Validator payments (gas + coinbase)
- Tokens transfers and profit
- Swaps and [arbitrages](#)
- ...and more

All data is stored in Postgres for querying and analysis

To get started, check out the [quick start](#)

To see which data inspect produces, check out the [data](#) section

Access and contribute to the public mev-inspect-py repository [here](#) . [Edit this page](#) Last updatedonJan 30, 2024 [Previous Rate limiting](#) [Next Quick Start](#)
