I would like to use a figment.io node with the Secret CLI. I'm trying to configure the node like so

secretcli config node https://secret-2--lcd--full.datahub.figment.io/apikey/

but when I run secretcli status

after this, I get an error

ERROR: Status: Post failed: Post https://secret-2--lcd--full.datahub.figment.io.apikey.: dial tcp: address secret-2--lcd--full.datahub.figment.io/apikey//: missing port in address

This is my config.toml

file content:

chain-id = "secret-2" indent = true node = "https://secret-2--lcd--full.datahub.figment.io:443/apikey/" output = "json" trust-node = true
