I want to discuss the amount of proposals one ape or one DAO can post. Main reason: one ape can be own bu tens of people or more or entire DAOS owning many apes. When group of people 24/7 posting and curating things - after I read those proposals it's feels them being extremely linked to centralized way of life and trying to sway others to give up their decentralized commodity or even privacy or even put them in security danger by inviting them to centralized applications that sells the users data and anyone n purchase it. I feel a part of proposals very close minded and outdated for the general decentralization society freedom and cause.

Some proposals in mass are TOO CURATED and contain hidden greedy feel to it.

So I want to ask every personal 1:1 ape to tell me how many proposals you want to see from 1 ape and how often. I bet there will be apes dropping long CURATED massages owned by centralized corporations and huge groups of people that are everywhere non stop no sleep and many of us know who. I want it to be fear to all people who trying to make it and be independent from control or sway of the opinion by …again… non from heart curated messages with hidden plan.
