Hi there,

I recently created a tool to help people stay informed across Web3, including the dYdX community[The dYdX community | x23.ai](#)

The tool aggregates, summarises (with an LLM), then ranks/prioritises governance discussions, so people can more efficiently stay informed.

I would love to hear any feedback on the tool, whether something is missing, and how i can build it out to be even more useful for the dYdX community.

Here are some example summaries of recent activity:

Governance discussion: [[DRC] Upgrade Markets to Active on the dYdX Chain | dYdX](#)

Pull request: [#730: [IND-461] handle deleveraging events | dYdX](#)

v4 code repository summary: [dYdX Code](#)

Feel free to reply here or DM me directly on twitter/telegram: daveytea
