Rate limiting

In order to protect our service from abuse we have rate limits on the number of requests that can be made to Flashbots Protect RPC. Currently, the rate limits are set as follows:

- There is no rate limit foreth_sendRawTransaction
- eth_call
- 200/IP/5min
- eth_getTransactionReceipt
- 200/IP/5min
- eth_getTransactionByBlockNumberAndIndex
- 200/IP/5min
- eth_getBalance
- 200/IP/5min
- Other requests are capped to 600/IP/5min

Note that this isrequests and nottransactions submitted per second. There is no limitation on the number of transactions in a request. Note that you are not required to read JSON RPC requests to send transactions to Flashbots Protect RPC.

Rate limiting exceptions

If you are a wallet or application integrating with protect and you require a higher rate limit please reach out toShea Ketsdever .

Batch request support

Flashbots Protect RPC is not supporting batch JSON-RPC requests. Edit this page Last updatedonFeb 13, 2024 Previous eth_sendPrivateTransaction Next Overview
