Restore a Validator

A validator can be completely restored on a new Sei node with the following set of keys:

- The Consensus key, stored in~/.sei/config/priv_validator.json
- The mnemonic to the validator wallet

⚠ Before proceeding, ensure that the existing validator is not active. Double voting has severe slashing consequences. To restore a validator:

- Setup a full Sei node synced up to the latest block.
- Replace the~/.sei/config/priv_validator.json
- file of the new node with the associated file from the old node, then restart your node.
