# eth_supportedEntryPoints

This method fetches the EntryPoint addresses supported by the bundler. The first address is the one preferred by the bundler to use.

## Request

```
{ "jsonrpc":"2.0", "method":"eth_supportedEntryPoints", "params": [], "id":1 }
```

## Response

```
{ "jsonrpc":"2.0", "id":1, "result": ["0x5FF137D4b0FDCD49DcA30c7CF57E578a026d2789"] }
```
