Dear Friends!

I want to express my gratitude to the entire team of Taiko and those who are in any way involved in the development of this project. I have just finished a thorough study of the latest materials from Vitalik and am amazed that Taiko is ALREADY solving the main problem of Ethereum. I have a feeling that several hundred people understand how valuable what the team is doing now. This is due to the state of the market, the current trend and other facts. Technologies are not always interesting to the community and this is a bit sad. But it is in our power to fix it!

Addressing the community, I want to encourage you to publish content/ tell your friends/ be constantly interested in and use Taiko. At the moment, such technologies do not receive due attention from the world community. We have to do everything to fix it. Attract the attention of developers as I do with the training materials "Taiko from A to Z"(https://twitter.com/alexander_blv/status/1653154080414396418?t=t_x-9QUiji7ialfaP5Liyw&s=19) or the entire crypto space as a whole as @umede.eth

with "Taiko Tuesday newsletter."

It is in our power to be involved in the reformation of the main cryptocurrency. Let's keep changing this world for the better the way Taiko does!

In this regard, I suggest you discuss all the ways to promote the Taiko community. Let's discuss it here. I look forward to your suggestions!
