[ARFC] Onboard weETH to Aave v3 on Ethereum[Governance

](/c/governance/4)

By "liquidity available under the Liquidation Penalty price impact", we mean the maximum amount that can be sold atomically on-chain, such that the slippage on that trade is less than the liquidation penalty, in this case 7.5%. Most of the on-chain liquidity for weETH is on two balancer pools:

Balancer Balancer

Assuming that liquidity doesn't change significantly, it should suffice to liquidate the entire amount of 8000 weETH: [image] Based on this liquidity data collected over the limited…
