Ideas - Blast Developer Documentation

With this, I propose to participate in the completion with the goal to deploy GMX V2 on BLAST.

Growth and utilisation of GM pools clearly demonstrate the ability of the protocol to attract TVL and sustainably utilise this liquidity for decentralised leverage trading. Furthermore, the ongoing STIP on Arbitrum shows the strength of incentives used in a sustainable measure to bootstrap liquidity needed to trade with deep liquidity on GMX.

A potential expansion to BLAST and initial liquidity bootstrapping will be key to achieve similar success on BLAST and will eventually lead to an extended GMX user base.

This extension will be beneficial for protocol growth, revenue for GMX stakers and people looking for exposure on BLAST.

Finally, a BLAST GM pool will allow for muted LP exposure and deep on-chain liquidity.

Looking forward to the discussion .
