Introduction

This tutorial will cover the basics of creating a dApp powered by the Biconomy SDK and utilizing Next JS and Particle Network. Here's an overview of what you'll learn:

- Go over a basic contract for minting an NFT.
- Use Biconomy Dashboard for getting paymaster URL and bundler URL.
- Register the contract and its write methods on the Biconomy Dashboard.
- Create a frontend with Next JS and Particle network that aims to be friendly to use for web2 users onboarding to web3.
