Hello galatic people

At Space4Build we firmly believe in the power of decentralization and collective intelligence

, for this reason we want to generate a space for participation so that any member of the community can participate and that together we can build a better ecosystem

Context

The Causathon is an activity that will going to be executed at Lima, Peru and seeks to generate a wonderfull experience

for all

participants, this includes developers, volunteers, organizations and communities that are encouraged to participate and support this activity.

Challenges

Challenges have been selected that we consider will allow us to attract the attention of large organizations to join the ecosystem as well as improve elements that allow the entire group to maintain themselves and continue building. The main ones are: Dao's, Gaming, Marketing and innovation.

On this occasion we would like to focus the solutions of the Gaming challenge on the Arbitrum ecosystem

and for this we would like them to be able to freely express in the comments what kind of games or software tools can bring more benefits to Arbitrum?

Below are some ideas

of things that could be improved but as we already mentioned, please feel free to respectfully give your opinion

and express your opinions and suggestions:

+Scalability and performance

: network congestion and latency

+Integration and compatibility

: Accessibility of devices, platforms and interoperability with existing projects.

+Security

: vulnerability in smart contracts, reduction of fraud and cheating.

+Game economy

: Stability of asset values, incentives and rewards.

+User adoption

: Technology education and market competition.

We hope to receive your comments

and from Space4Build we will continue making efforts to contribute to a better community.
