Big fan of iterating imperfectly and fast, especially in a world, crypto, in which we go at fast speed light. Cow engineer, doing risk analysis and models at Jones DAO, helping in Arbitrum governance as much as I can. You might have seen me in a few grants program, such as the LTIPP, the Questbook "New protocols and ideas" domain, and the Uniswap Arbitrum Grant Program. Yes, I like helping protocols grow in Arbitrum a lot.

Note: this thread will encompass only my personal voting reasons, and does not represent the opinions of any protocol or entity that I might be part of, partner with or contribute in any form. Remember, I'm just a cow.
