Migrating to v2

This guide references the major changes between v1 and v2 to help those migrating an existing app.

GelatoRelayPack

- TheGelatoRelayPack
- constructor now includes a mandatoryprotocolKit
- parameter. It's required for any new pack extending theRelayKitBasePack
- .

constructor ({ apiKey , protocolKit }: GelatoOptions)

- We removed theprotocolKit
- parameter from thecreateTransactionWithHandlePayment()
- ,createTransactionWithTransfer()
- , andexecuteRelayTransaction()
- methods in theGelatoRelayPack
- as now it's included in the constructor.
- Removed theexport interface RelayPack
- type as we now use an abstract class.
