Summary

This Temp Check proposes the addition of slisBNB from ListaDAO to Aave V3 BNB chain to enhance LST liquidity and asset diversity.

Motivation

1. Benefits of listing:

slisBNB is the native yield bearing and liquid staking token for BNB, built by Lista DAO. slisBNB appreciates against BNB in line with BNB's staking APR, allowing users have the freedom to earn additional yields on different DeFi platforms while earning staking rewards passively.

slisBNB is the largest BNB LST in terms of TVL (~$225M) and holders (350,262), listing slisBNB can bring both Aave and Lista communities the opportunities to enjoy the passive yield of supplying slisBNB on Aave as well as the Lista token airdrop.

1. Chain to be deployed: BNB Chain

2. Proof of Liquidity: Lista DAO is open to provide $2500 weekly incentives, last for 8 weeks to bootstrap the liquidity of slisBNB on Aave.

3. Useful links: https://lista.org/

Disclaimer

This proposal is powered by core contributor of ListaDAO.

The Aave Chan Initiative is not directly affiliated with Lista DAO and did not receive compensation for creation this proposal.

Next Steps

1.If consensus is reached on this [TEMP CHECK], escalate this proposal to the Snapshot stage.

2.If the Snapshot outcome is YAE, this proposal will be escalated to ARFC stage

3.Publication of a standard ARFC, collect community & service providers feedback before escalating proposal to ARFC snapshot stage

4.If the ARFC snapshot outcome is YAE, publish an AIP vote for final confirmation and enforcement of the proposal
