Get the Safe CLI

The Safe CLI can be run using [Docker(opens in a new tab)](#) or [pip(opens in a new tab)](#) .

Using Docker

Prerequisite: Install [Docker Desktop(opens in a new tab)](#) .

Once Docker is installed on your system, run the following command to create new Safe accounts:

docker

run

-it

safeglobal/safe-cli

safe-creator

You can also run the following command to run the Safe CLI with an existing Safe:

docker

run

-it

safeglobal/safe-cli

safe-cli

< checksummed_safe_addres s

< ethereum_node_ur l

Using Python pip

Prerequisite: [Python(opens in a new tab)](#)

= 3.9 (Python 3.12 is recommended).

Once Python is installed on your system, run the following command to install the Safe CLI:

pip3

install

-U

safe-cli
