Transactions

Users interact with NEAR by creating transactions. Specifically, user's use their account's [private keys](#) to sign transactions, which are then broadcasted and processed by the network.

A transaction is composed of one or more [Actions](#) , and each action costs a deterministic amount of [gas units](#) . This gas units are translated into a cost in NEAR tokens, which the user must pay for the transaction to be processed.

tip You can use an [Explorer](#) to inspect transactions in the NEAR network [Edit this page](#) Last updatedonMar 25, 2024 bygagdiez Was this page helpful? Yes No
