Hello Secret community!

We're happy to announce that SCRT Labs has signed an SLA with[Consensus One](#) to provide core API infrastructure to Secret Network. This API will be dedicated to serving essential services like Keplr, Fina, Leap and other wallets, ensuring that users have the best possible experience when using Secret Network. Consensus One has extensive experience in this industry, having been a validator on Secret Network for years, and also currently validating on 23 other Cosmos chains.

In conjunction with this change, the Secret Express API will be paused at the end of February. We greatly appreciate the service that it and its many contributors have provided to Secret Network over the years!

The Consensus One API is being put in place now. Users shouldn't experience any changes. If you have any questions about this change, feel free to ask them here.
