Basic instructions

To compile release version of the smart contract you can run a build script (specified inpackage.json for your project as{ build: near-sdk-js build, ... }):

npm run build info The abovebuild command seeks aindex.js file in/src and outputs acontract.wasm file in a newly created/build folder at the same level as/src . For more information, see the[source code for the CLI commands here](#) . [Edit this page](#) Last updatedonJan 20, 2023 byDennis Was this page helpful? Yes No
