Hello!

Please tell me. I have two evm wallets, till previos year I`m working on your testnet network in one of them, but my account on Galxe have another one primary registered wallet.

Tell me, is it enough that I connected the wallet that I use on your testnet with my Galxe profile as a secondary wallet or do I need to do something else?

Just want to make sure that your system considers both of these wallets are belong to one user, not different ones.))
