In the scope of the Froopyland Incentivized Testnet, you had announced to award the best RollApps as described in "[Froopyland Incentivized Testnet. Prepare to embark on an… | by Dymension | Medium](#)". Have you conducted a ranking for the RollApps developed for the Dymension Froopyland Incentivized Testnet?

Many testnet participants, including myself, have designed RollApps for this purpose. We have made consistent updates and improvements to our projects, designed numerous new smart contracts, distributed them, set up faucets for our testnet network, created explorers, and had hundreds or thousands of testnet users test them. Sometimes, we even went through so many stress tests that our nodes crashed (I personally had to set up new nodes four times). However, we received the same reward as those who set up Rollapp Nodes with just 3 commands. Considering that our score may have even decreased when setting up new nodes again, we may have received even less. I believe that such efforts should have a reward.

To clarify the proposed distribution of rewards for the top 50 RollApps in the Froopyland Incentivized Testnet, the rewards will be divided into four tiers as follows:

Tier 1: The top 3 RollApps will each receive an equal share of 75,000 DYM.

Tier 2: RollApps ranked 4th, 5th, and 6th will each receive an equal share of 50,000 DYM.

Tier 3: RollApps ranked 7th, 8th, 9th, and 10th will each receive an equal share of 25,000 DYM.

Tier 4: The remaining 40 performers will each receive an equal share of 10,625 DYM.
