truffle-ts-percel-box¶

This box is a sample that use Web3 1.0.0-beta and TypeScript 2.8, percel, metacoin box. I'm happy if this sample is useful for learning etheruem.

Installation¶

1. Install Truffle globally.
2. npm
3. install
4. -
5. g
6. truffle
7. Download the box. This also takes care of installing the necessary dependencies.
8. truffle
9. unbox
10. YuichiNukiyama
11. /
12. truffle
13. -
14. ts
15. -
16. percel
17. -
18. box

NOTE : This box depend on Web3.js 1.0.0-beta. And this package can't install onWindows without build-tools. If you want to use this sample on Windows, execute following script beforetruffle unbx :

// You shoud execute with administrator authority.

npm

install

-- global

-- production

windows

build

tools

1. Run the development console.
2. truffle
3. develop
4. Compile and migrate the smart contracts. Note inside the development console we don't preface commands withtruffle
5. .
6. compile
7. migrate
8. Run thepercel
9. development server (outside the development console) for front-end hot reloading. Smart contract changes must be manually recompiled and migrated.
10. // Serves the front-end on http://localhost:1234
11. npm
12. run
13. dev
14. Cleanup extra data after stop truffle and percel.javascript npm run clean
