seid query dex get-price

Get the price for a pair from a dex specified by the contract-address. The price and asset denom are used to specify the dex pair for which to return the latest price. The timestamp is used to query the price for that specific timestamp. For the latest price use get-latest-price instead or for all prices use get-prices.

Usage: seid query dex get-price [contract-address] [timestamp] [price-denom] [asset-denom] [flags]

Flags: --height int Use a specific height to query state at (this can error if the node is pruning state) -h, --help help for get-price --node string : to Tendermint RPC interface for this chain (default "tcp://localhost:26657") -o, --output string Output format (text|json) (default "text")

Global Flags: --chain-id string The network chain ID --home string directory for config and data (default "~/.sei") --log_format string The logging format (json|plain) --log_level string The logging level (trace|debug|info|warn|error|fatal|panic) --trace print out full stack trace on errors Last updated onJuly 1, 2024 get-orders get-prices
