Updates

Executives

- There were no executives during december.

Protocol Engineering Scope - Governance Security Engineering Work:

- An extension of the services Chain Security offers to the DAO was agreed and usage of their services already started this year by auditing modifications to existing code that was implemented last year.

- Further discussions with several Ecosystem Actors took place to find a way forward for replacing Goerli testnet in the different processes and needs the DAO has. A trial will take place in January where we will test a solution for Spell crafting and testing with Sidestream as well as a testing environment for Endgame modules with other EAs.

- As continuous-on improvement efforts Dewiz and Sidestream perform in the spell repos,[we've suggested the following improvement](#) to ease the developer experience when testing spells.

Endgame workstream

- The [LitePSM, MOM contracts and deployment scripts](#) have been implemented and reviewed in collaboration with PullUp. The code has been audited by Chain Security and Spearbit successfully. We are now focused on coordinating with legal contacts to define next steps to operationalize it.

- We continued to support the Launch Project by discussing coordination and planning efforts for 2024.
